

Leather Care and Cleaning

PROLONGING THE WEAR LIFE OF YOUR LEATHER IS SIMPLE:

1. Conditions to avoid:

2. Things to do

Cleaning

Light Cleaning - All Leather Types

Once a week wipe down with a clean, slightly damp dye-fast cloth to remove dust and grime. Careful vacuuming with a suitable brush attachment is recommended for the removal of day-to-day dust, crumbs and other minor debris. On Nubuck, brush the nap up in the wear areas using the brush from your Pelle Master Kit

Pigmented Top-Coated and Semi-Aniline Leathers

Deep Cleaning : once every 3-4 months, give your leather a deep clean to remove built up soiling and perspiration from the grain of your leather. Do one panel at a time as directed using the brush from your Pelle Master Kit to clean the grain and reprotect with the Leather Conditioner/Protector.

Conditioning/Reprotecting: After deep cleaning, remoisturise and protect your leather. This keeps your leather soft, supple and conditioned for the flexing required in upholstery. The protector components in this product will provide excellent protection against soiling and spillages making cleaning easier and giving a soft sheen to top coated leathers.

Pull Up and Wax Oil Finished Leathers

Deep Cleaning: Do not spray cleaner direct onto leather. Dampen a clean dye fast cloth (cotton toweling is ideal) by spraying with the cleaner. Do not saturate. Rub clean 1 panel or 1sq m at a time, keeping cloth damp with cleaner as required. Leave to dry naturally and thoroughly before reuse, or applying the Conditioner/Protector.

Conditioning/Reprotecting: After deep cleaning, remoisturise and protect your leather using the Conditioner/Protector as directed. In normal circumstances this will keep your leather in pristine condition. However these leathers can dry out requiring a reapplication of the oils and waxes originally used. Pelle Revitaliser will restore the suppleness and depth of colour to your leather.

Stain Removal

The removal of marks as soon as they are noticed invariably assists in the removal. If you cannot remove a mark with the Pelle System Cleaner as directed, don't persist as you may damage the leather. Consult Pelle or a leather repair company.

Spillage Removal

Soak up fluids as quickly as possible, removing the cushions (if loose) using a colour-fast towel. Wipe over your leather, rinsing cloth out in cold water and cleaning as you go. Let your suite dry slowly away from direct heat or sunlight. When dry, inspect and clean using the Pelle System Care Kit.

Mould Protection

For your protection, the Pelle System Care Products have Pelle B.F.A. Pelle B.F.A. is a full Bacteriostatic Fungistatic Anti-Mould.

Recolouring Pigmented Leathers

You can recolour scratches and other small marks with the Pelle System Touch Up. Large areas would need the attention of a recolouring company. If in doubt contact Pelle.

Storage of Furniture

If you are required for any length of time to store your furniture, the following hints will be helpful.

1. Clean your furniture thoroughly. Apply two light coats of the Pelle System Conditioner/Protector, or if Nubuck, Conditioner/Stainguard as directed.
2. Cover for furniture with breathable dye-fast material such as woollen blankets, calico or cotton sheeting. Do not cover furniture with plastic or seal for long periods.
3. Store your furniture away from any direct heat or sunlight, in an airy room of even temperature.
4. Have your furniture inspected every 2 - 3 months. NB: the more humid the climate in which your leather is stored, the greater the chance of mould growths.

Medication

If you or a member of your family is on medication such as aspirin, or tablets for a heart condition and spend a lot of time on your furniture, either deep clean once a month or protect your leather with a wool-blend cloth covering. It has been found that some drugs cause perspiration to become very acidic, resulting in colour loss and breakdown of pigments plus staining that can cause severe damage. If in doubt, contact Pelle.

Waxed Oiled Leather

Over time these may dry out causing a lightening of the colour. Pelle Revitaliser is a special dressing for these leathers that will nourish the hide, restoring the original depth of colour and softness. This product is not required for maintenance, just occasional use.

Scratch Repair

Pelle Touch Up in the Scratch Repair Kit is a wipe on colour for permanent repair for small grazes, scratches etc. Check with your Pelle Stockist. If the colour of your leather is not available, phone Pelle on the free call number where you can order direct.
